Hey there, 

I'm a **bilingually-fluent German- & English-speaking** full-stack developer with 5+ years of experience in designing, developing and leading the development of scalable & accessible platforms.

Work Experience

Founding Tech Lead

R3leaf GmbH 07/2024 - Now

~ R3leaf is a climate-tech company working with large geospatial and climate datasets; we build customer-facing apps to interpret and act on their building data using heuristics, RAG & LLMs

~ I spearhead AI adoption strategy at the company – I architected and built a production RAG for our knowledgebase, accelerating internal comms and development through enhanced retrieval

~ I wrangle hundreds of GBs of climate-data in diverse geospatial formats (NETCDF, GeoTIFF, GML) into PostGIS and build a fullstack web-app that make these data easily interpretable

~ I mentor junior developers, creating comprehensive technical specification for new features to guide them to seniority

Terraform (Hashicorp) | AWS | Hetzner | Coolify | Vercel | Docker | Python (Django) | Vercel AI SDK | Multi-agentic programming | RAG | Context-engineering | React/NextJS

Instructor

Devhaus Leipzig 06/2022 – 07/2023

~ Devhaus is a codecamp that teaches full-stack development, with a frontend focus using Nextjs

~ I facilitated training for budding full-stack developers, educated 3 cohorts on their road to graduation

~ I reviewed code for student dev teams building full-stack applications acting as their product lead

~ I modernised an academic project using Svelte to improve data collection UX for a variety of data-collection funnels for scientists, earning the codecamp credibility with our academic partners

Vercel | Docker | Javascript | Typescript | React/NextJS | TailwindCSS | HTML (W3C) | A11y (Accessibility) | i18n (Internationalisation) | i10n (Localisation) | Storybook | Svelte | Drizzle

Working-student frontend developer

Mogic GmbH 06/2021 – 06/2022

~ Mogic is a digital agency that builds websites, customer portals, and consults on public digitalisation

~ I integrated and optimized modern CMS components for high-traffic projects, focusing on accessibility and performance

~ I solved countless site-reliability issues, contributing to Mogics reliable image as a digital agency

~ I upgraded and maintained existing production applications to extend their lifespan

Docker | SCSS | Storybook | JS | AlpineJS | Typo3 | PHP | HTML (W3C) | A11y (Accessibility) | Wordpress

Working-student software engineer

Rohde & Schwarz Cybersecurity 04/2020 – 07/2021

~ NDA

Working-student backend developer

eCommeleon 11/2019 – 03/2020

~ eCommeleon is a SaaS product integrating external marketplaces for e-commerce operations

~ I developed an internal Windows desktop app with C# that scraped and ingested the Walmart API into a production MySQL database

PHP (Laravel) | C# | MySQL | .NET

Education

Universität Leipzig – Faculty of Mathematics and Computer Science

Digital Humanities, B.Sc

04/2017 – 09/2022

Grade: 2.3

Projects:

- ~ Built a social media scraper for twitter that analysed hundreds of GBs of political data
- ~ Created a foundational GAN neural network that generates new pictures of faces based on JESTER data
- ~ See [Bachelors thesis](#)

UML | ER-Modeling | C | Python | CLISP | SQL | Java | Prolog | Golang | Pytorch | GAN | R | Prisma | Git | Linux

University of Zagreb – Faculty of Electrical Engineering and Computing

Erasmus

Grade: 2

Zagreb, Croatia, 08/2020 – 03/2021

Projects:

- ~ Built a movie-recommendation app that uses [semantic-search](#) to search for aggregated film data
- ~ Completed robotics simulation assignments
- ~ Built a first-person 3D graffiti-simulator as a mobile webapp (see [portfolio](#))

ROS | ROSCORE | Typescript | Angular | SCSS | Topic-modelling | C++ | Python | RTOS | NoSQL | C | Bash

Open-Source Contributions

Community Platform

The OneArmy community platform aims to unify communities that contribute to social & environmental projects, such as [Precious](#), [Plastic](#), [Phonebloks](#), [ProjectKamp](#) or [StoryHopper](#).

[Repo](#)

[My contributions](#)

FabLab Farm Egg Incubator

The FabLab Farm is a workaway I visited, where I worked together with a hardware hacker to create a DIY egg incubator that any father-and-son could build together as an educational project.

I contributed a preact frontend that communicated with an ESP32 microcontroller, (with <4MB of flash memory) that regulated temperature and humidity inside the egg incubator

[Repo](#)

[My contributions](#)

ESP32 | Preact | C | Breadboarding | Electronics

Driving License

I'm licensed to drive in the EU & I've owned a car for two years.

Cars (B), Tractors (L), Motorbikes (AM)
